

## **Job Description for Medical Writer**

### **About FathomX**

FathomX is a Digital Health AI spin-off company from the National University of Singapore and National University Health System and is the brainchild of Dr Mikael Hartman (Breast Cancer Surgeon at NUH) and Dr Feng Meng Ling (Assistant Professor at the Saw Swee Hock School of Public Health). Our flagship product, FxMammo, is an AI Assistant that significantly improves the screening procedure for mammograms by enhancing both the efficiency and accuracy of screening processes.

The roles & responsibilities and requirement of the candidate are as listed below:

### **Roles and Responsibilities**

- Writing medical papers and conducting statistical analysis for compilation of clinical evaluation reports for regulatory submission
- Preparing drafts of scientific papers based on research findings, which are then submitted to peer reviewers for revisions and publication
- Preparing drafts of clinical research protocols, study design plans and clinical trial results for approval by institutional review boards (IRBs) before commencing research studies
- Coordinating with various teams including regulatory and scientific teams to push out documentations for regulatory submission and commercial deployment

### **Requirements:**

- Bachelor degree and above, with at least 2 years of relevant experience
- In-depth understanding of what it takes to draft clinical evaluation reports and interpret data from various sources
- Experiences in epidemiology and statistics are preferred
- Good English document writing skills, and able to communicate fluently in English.

### **Nice to have:**

- A good attitude to learn and be willing to work with different age groups in a startup and research environment.
